# INTRODUCTION

- The formulation of a topical product and the occurrence of local skin reactions are both important factors contributing to patient treatment adherence and satisfaction<sup>1</sup>
- Excipients such as propylene glycol, polyethylene glycol, and ethanol are in almost all topical prescriptions and are the most utilized penetration enhancers to overcome barrier properties of the skin<sup>2,3</sup> These excipients may irritate the skin, causing local tolerability reactions such as burning and stinging, which can reduce patient adherence<sup>2</sup>
- Topical roflumilast, is a highly potent (Kd~0.7 nM) phosphodiesterase 4 inhibitor, formulated as a water-based foam and a cream with no sensitizers, penetration enhancers, or fragrances<sup>4</sup>
- Vehicle excipients in topical roflumilast include ceteareth-10 phosphate, cetearyl phosphate, cetostearyl alcohol, diethylene glycol monoethyl ether, hexylene glycol, isopropyl palmitate, methylparaben, propylparaben, purified water, sodium hydroxide, and white petrolatum<sup>5</sup>
- Investigator- and patient-rated local tolerability was assessed prospectively in Phase 3 clinical trials in patients with psoriasis (DERMIS-1, DERMIS-2, ARRECTOR), seborrheic dermatitis (STRATUM), and atopic dermatitis (INTEGUMENT-1, INTEGUMENT-2)
- Investigator- and patient-reported local tolerability report different aspects of irritation, with only patient-reported local tolerability assessing sensation (stinging and burning) of a topically applied treatment

# METHODS

- These were randomized, parallel-group, double-blind, vehicle-controlled, multicenter Phase 3 studies (Table 1)
- Investigators assessed local tolerability on an 8-point scale in the clinic before investigational product (IP) application (**Table 2**)
- Patients reported local tolerability on a 4-point scale in the clinic 10–15 minutes after IP application (Table 2)
- Tolerability was also assessed by reviewing documented adverse events

#### Table 1. Study Designs

Table 11 otday besigns							
Trial	Treatment Groups	Inclusion Criteria	Tolerability Assessments				
DERMIS-1/-2 <sup>6</sup> (psoriasis)	Roflumilast cream 0.3% (N=576) Vehicle (N=305)	≥2 years of age BSA: 2–20% IGA ≥2 (Mild) PASI ≥2	Baseline, Weeks 4, 8				
ARRECTOR (scalp and body psoriasis)	Roflumilast foam 0.3% (N=281) Vehicle (N=151)	≥12 years of age BSA: ≤25% (≤20% non-scalp, ≥10% scalp) S-IGA: ≥3 (Moderate) B-IGA: ≥2 (Mild) PSSI: ≥6 PASI: ≥2	Baseline, Weeks 2, 4, 8				
STRATUM (seborrheic dermatitis)	Roflumilast foam 0.3% (N=304) Vehicle (N=153)	≥9 years of age BSA: ≤20% IGA: ≥3 (Moderate)	Baseline, Weeks 4, 8				
INTEGUMENT-1/-2 (atopic dermatitis)	Roflumilast cream 0.15% (N=884) Vehicle (N=453)	≥6 years of age BSA: ≥3% vIGA-AD: 2 (Mild) to 3 (Moderate) EASI: ≥5	Baseline, Weeks 1, 2, 4				

B-IGA: Body-Investigator Global Assessment; BSA: body surface area; EASI: Eczema Area and Severity Index; IGA: Investigator Global Assessment; PASI: Psoriasis Area and Severity Index; PSSI: Psoriasis Scalp Severity Index; S-IGA: Scalp-Investigator Global Assessment; vIGA-AD: Validated Global Assessment for Atopic Dermatitis.

#### Table 2. Local Tolerability Scales

Table 2. Local Tolerability Scales						
Investigator-Rated Local Tolerability Conducted by the investigator PRIOR to application in the clinic		Patient-Rated Local Tolerability Reported by the patient 10–15 minutes AFTER application in clinic*				
Grade	Dermal response	Grade	Sensation Following Drug Application			
0	No evidence of irritation	0	No sensation			
1	Minimal erythema, barely perceptible	1	Slight warm, tingling sensation; not really bothersome			
2	Definite erythema, readily visible; minimal edema or minimal papular response	2	Definite warm, tingling sensation that is somewhat bothersome			
3	Erythema and papules	3	Hot, tingling/stinging sensation that has caused definite discomfort			
4	Definite edema					
5	Erythema, edema, and papules					
6	Vesicular eruption					
7	Strong reaction spreading beyond application site					

\*At some timepoints, patient-reported local tolerability was based on the recall of the experience post application on the day prior to the clinic visit: INTEGUMENT (Week 4), STRATUM (Weeks 4, 8), ARRECTOR (Week 8).

#### **Baseline Demographic and Disease Characteristics**

- Baseline demographics and disease characteristics were similar across trials and groups
- Facial and genital involvement at baseline in each trial is shown in **Table 3**

#### Table 3. Facial and Genital Involvement at Baseline

Trial	Face, n (%)	Genitalia, n (%)
Pooled DERMIS (N=881)	234 (26.6)	137 (15.6)
ARRECTOR (N=432)	157 (36.3)	75 (17.4)
STRATUM (N=457)	284 (62.1)	Data not collected
Pooled INTEGUMENT (N=1337)	567 (42.4)	Data not collected

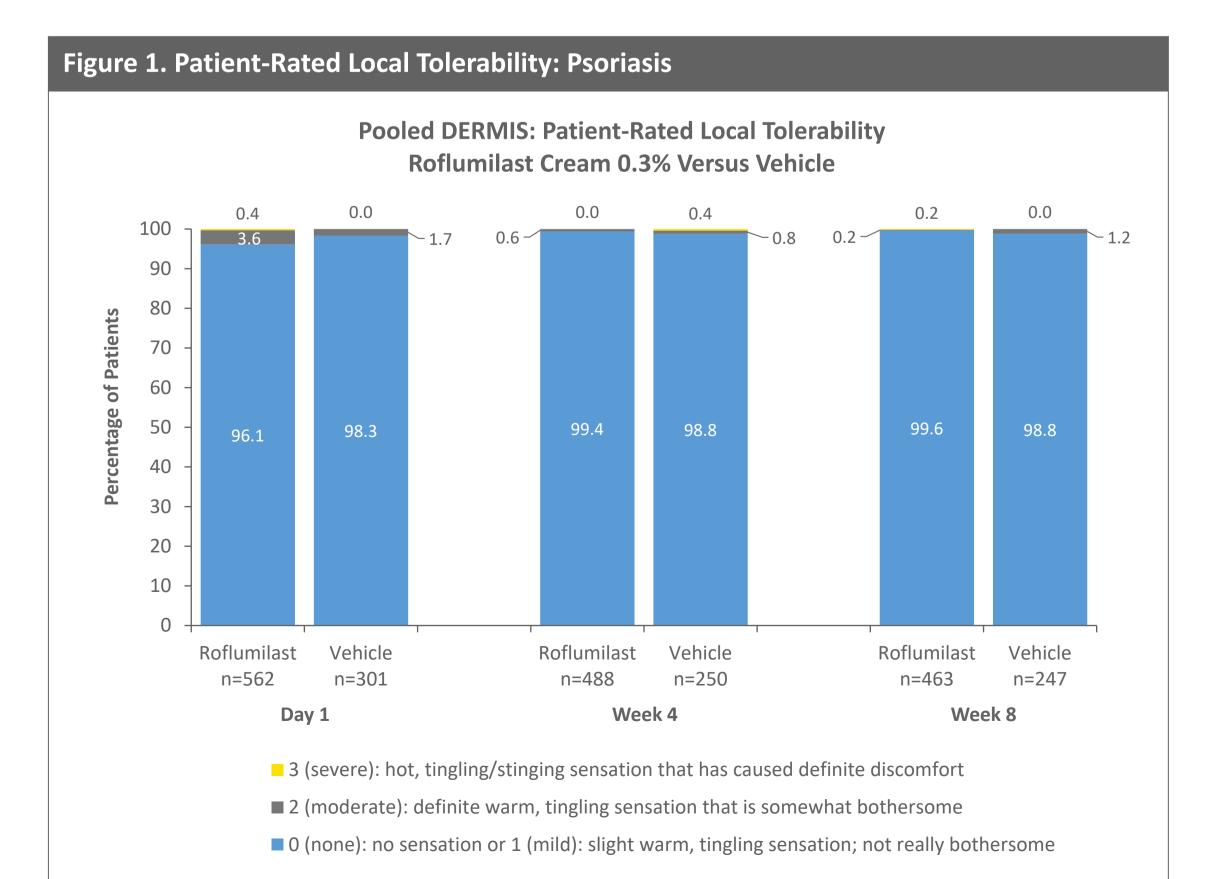

#### **Investigator-Rated Local Tolerability**

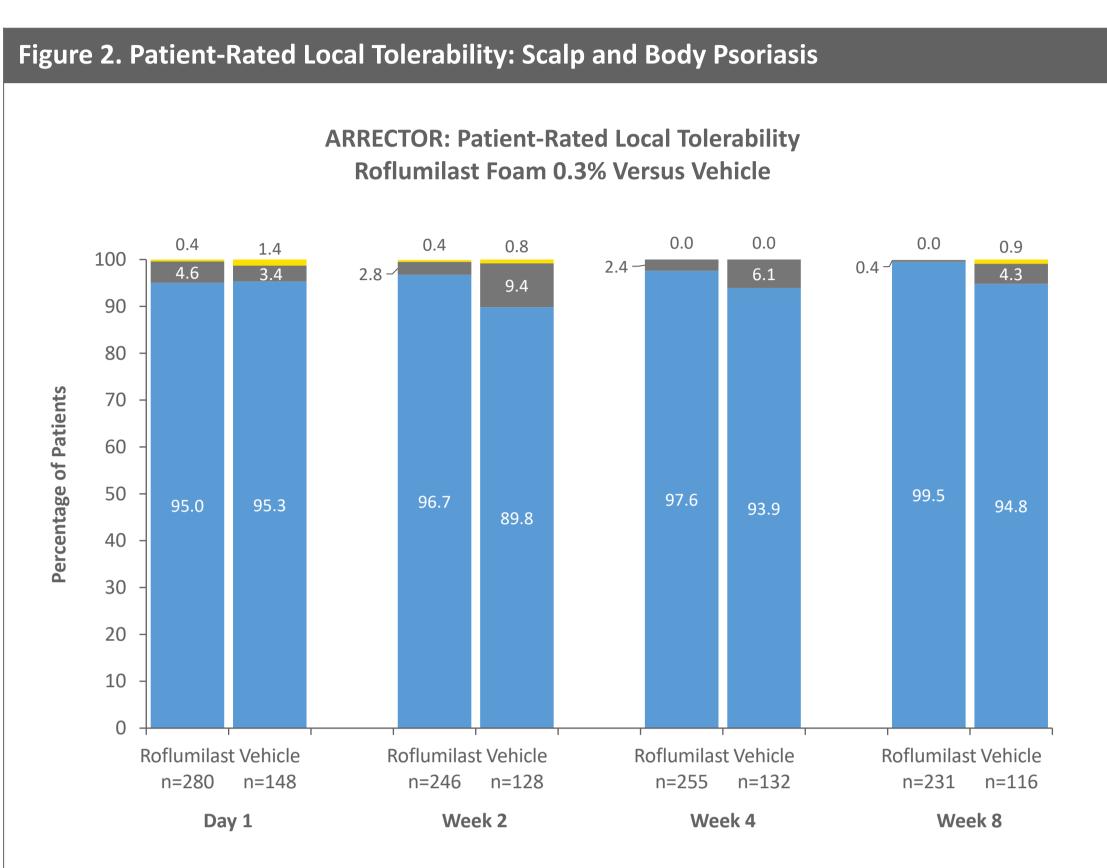

- Most patients in the roflumilast-treated groups had no evidence of irritation as assessed by investigators across trials and timepoints (**Table 4**)
- Most patients reported mild to no sensation across all trials, improving with treatment (DERMIS: Figure 1; ARRECTOR: Figure 2; STRATUM: Figure 3; INTEGUMENT: Figure 4)

#### Table 4. Investigator-Rated Local Tolerability

		% of patients with no evidence (score=0) of irritation per investigator			
Trial	Disease	Treatment	Baseline	Week 4	Week 8
DERMIS-1/-2	Psoriasis	Roflumilast cream 0.3% (N=576)	99.8	98.8	98.6
		Vehicle (N=305)	100	97.7	98.4
ARRECTOR	Scalp and body psoriasis	Roflumilast foam 0.3% (N=281)	100	99.6	100
		Vehicle (N=151)	100	98.5	100
STRATUM	Seborrheic dermatitis	Roflumilast foam 0.3% (N=304)	100	98.9	100
		Vehicle (N=153)	100	100	100
INTEGUMENT-1/-2	Atopic dermatitis	Roflumilast cream 0.15% (N=885)	100	97.3	NA
		Vehicle (N=451)	100	97.4	NA

NA: not applicable.

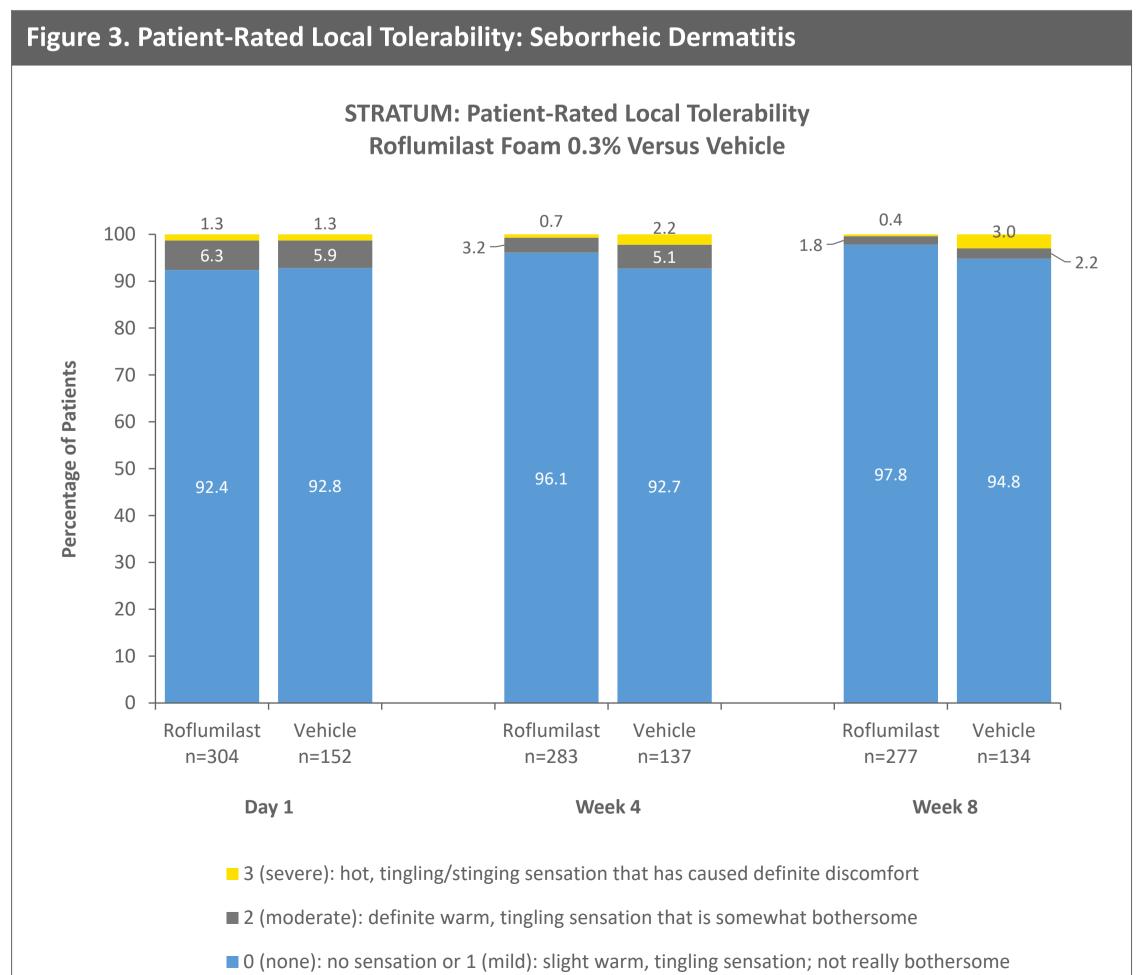

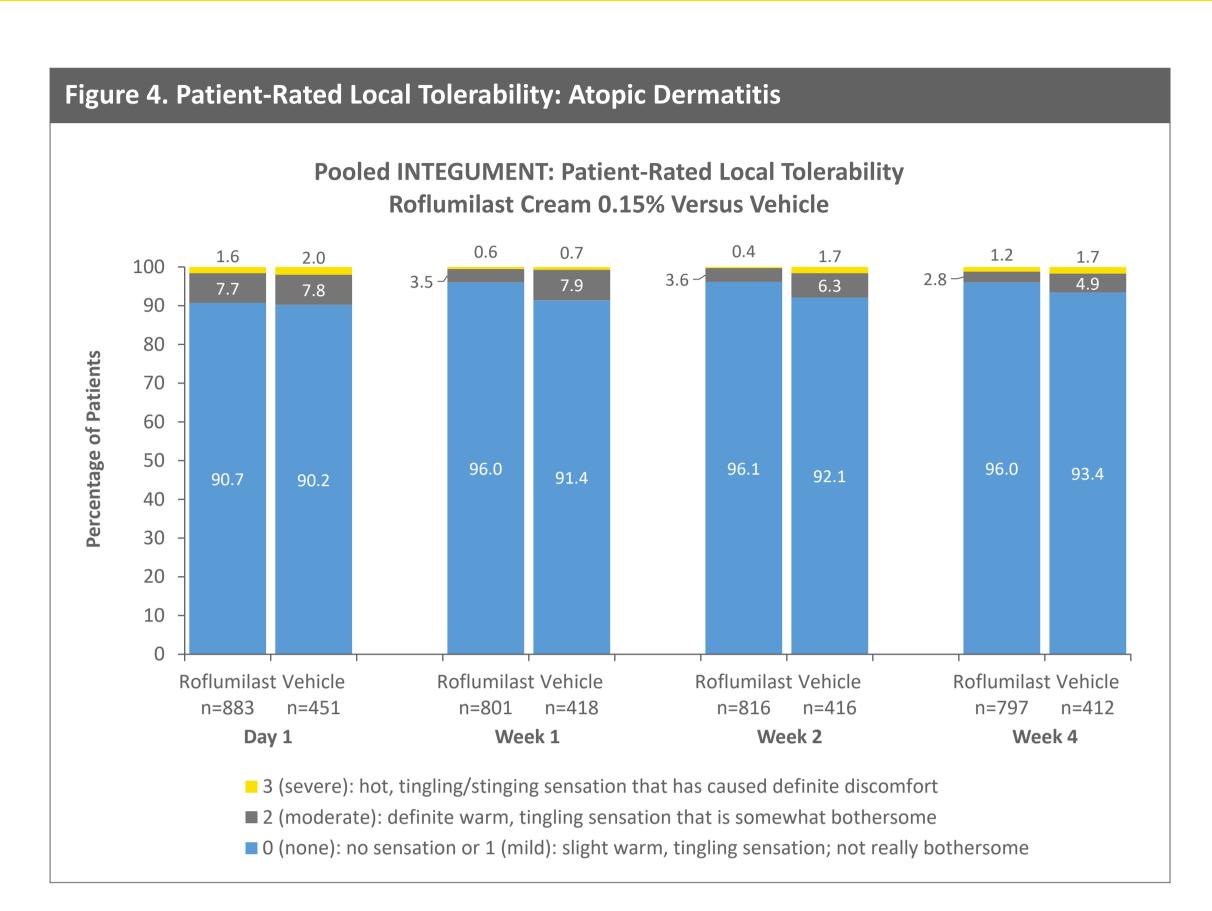

3 (severe): hot, tingling/stinging sensation that has caused definite discomfort

2 (moderate): definite warm, tingling sensation that is somewhat bothersome

O (none): no sensation or 1 (mild): slight warm, tingling sensation; not really bothersome

#### **Treatment Emergent Adverse Events**

• Application site reactions were infrequent across trials (**Table 5**)

#### Table 5. Treatment-Emergent Adverse Events Reported at the Site of Application, by Preferred Term, in ≥1% in the Roflumilast-treated Patients in Any Trial

TEAE, n (%)	Pooled DERMIS Psoriasis		ARRECTOR Scalp and Body Psoriasis		STRATUM Seborrheic Dermatitis		Pooled INTEGUMENT Atopic Dermatitis	
	Roflumilast Cream 0.3% (N=576)	Vehicle (N=305)	Roflumilast Foam 0.3% (N=281)	Vehicle (N=151)	Roflumilast Foam 0.3% (N=304)	Vehicle (N=153)	Roflumilast Cream 0.15% (N=885)	Vehicle (N=451)
Application site pain	6 (1.0)	1 (0.3)	1 (0.4)	0	1 (0.3)	3 (2.0)	13 (1.5)	3 (0.7)
Application site pruritis	3 (0.5)	1 (0.3)	0	0	3 (1.0)	0	2 (0.2)	0

TEAE: treatment-emergent adverse event

## CONCLUSIONS

- Local tolerability was favorable across timepoints and improved with treatment, regardless of indication, cream or foam formulation, or roflumilast concentration
- Rates of application site AEs were low and consistent with vehicle across trials
- Roflumilast cream and foam formulations demonstrated favorable local tolerability based on investigator- and patient-rated assessments in patients with psoriasis, seborrheic dermatitis, and atopic dermatitis, including in patients with involvement in sensitive areas such as the face, genital, and intertriginous areas

#### ACKNOWLEDGEMENTS

Thank you to the investigators and their staff for their participation in the trial. We are grateful to the study participants and their families for their time and commitment. Writing support was provided by Ashley Oney, MD, and Christina McManus, PhD, Alligent Biopharm Consulting LLC, and funded by Arcutis Biotherapeutics, Inc.

#### DISCLOSURES

CGB, NB, JDR, ZDD, LFE, LHK, MGL, MG, LJG, AAH, RBV, MZ, ELS, and LSG are investigators and/or consultants for Arcutis Biotherapeutics, Inc. and received grants/research funding and/or honoraria; MS, SS, DWO, PB, RCH, DHC, and DRB are employees of Arcutis Biotherapeutics, Inc. Additional disclosures provided on request.
